The park will therefore also double-up as a repository of cultural heritage and traditional knowledge systems.

An eco-system pertaining to traditional agricultural practices will be set up, and this will include a model village-tank or reservoir, paddy fields and high land where a multiplicity of crops will be grown. The entire agricultural process, from land preparation to post-harvest practices will be showcased. Traditional knowledge and practices pertaining to agriculture will be employed throughout the process and will be complemented by cultural elements that have for centuries been part and parcel of this sustainable patterns of being.
